

Magnetic-Inductive Flow Meter/Totalizer

for Liquids

measuring
•
monitoring
•
analysing

- Measuring range: 0.01...10 m/s
- No pressure loss with pipe restrictions
- Measurement result not affected by density, viscosity or temperature
- Analogue/frequency and status output
- High accuracy: 0.5 % of measured value
- Can be fully emptied, with nothing remaining
- Turndown ratio 1000 : 1

Model:
PMG-...

Description

The new KOBOLD flow meter model PMG works according to the magnetic-inductive principle. In line with Faraday's law, a voltage is induced in a conductor which moves in a magnetic field. The conducting measured medium corresponds with moving conductor. The voltage induced is proportional to the flow velocity and thus a measure of the volume rate of the flow. Minimum electrical conductivity of 5 µS/cm of the medium is a prerequisite. The induced voltage is fed to an instrument amplifier by two measuring electrodes which are in contact with the measured medium. The defined tube diameter is used to calculate the volumetric flow.

Measurement is independent of the medium and its physical properties, such as density, viscosity and temperature.

Fields of application

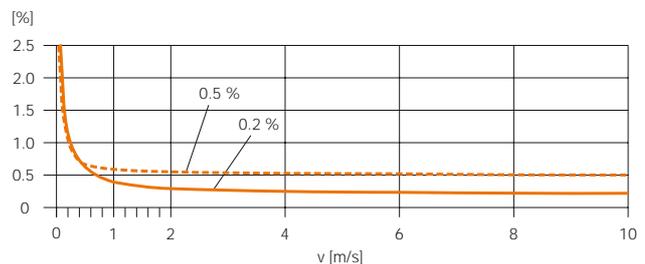

All volume flows of liquid media with electrical conductivity > 5 µS/cm (for demineralized water > 20 µS/cm) can be measured.

- acids, alkalis
- pastes, slurries
- drinking water, waste water
- sewage sludge
- beer, wine, milk, mineral water
- spirits, molasses, fruit juice
- soft cheese etc.

Technical details (Electronics)

Measuring range:	0.01 - 10 m/s
Turndown ratio:	> 1000 : 1
Minimum conductivity:	≥ 5 µS/cm (liquids in general) ≥ 20 µS/cm (demineralized water)
Accuracy	
pulse output:	± 0.5 % f. s. ± 1 mm/s
current output:	additional typically ± 5 µA

Measurement error [%] of measured value

Repeatability:	± 0.1 % f. s. ± 0.5 mm/s
Calibration:	3 measuring points; 0.5 % 3 measuring points; 0.2 %
Media temperature	
nominal size 2 - 15:	-20 to +130 °C (EPDM gasket) -20 to +150 °C (FPM / Kalrez seal)
nominal size 25 - 300:	-20 to +70 °C
Storage temperature:	-10 to +50 °C
Ambient temperature:	-20 to +60 °C
Max. pressure:	PN 40 / 25 / 16 / 10 (depending on nominal size) class 150 / 300 (depending on nominal size)
Inlet pipe straight:	≥ 5 x DN
Outlet pipe straight:	≥ 2 x DN
Materials	
Case material:	aluminium-casting powder-coated, stainless steel 1.4301 (DN 2-15 transducer)
Flange material:	
DIN:	stainless steel 1.4404; PVDF (DN 2 - 15); Steel ST37-2; stainless steel 1.4571 (> DN 25)
ANSI:	316L; PVDF (DN 2 - 15) A105, 316L (> DN 25)
Lining:	PFA (DN 2-15) polyurethane (> DN 25)
Electrode material:	stainless steel 1.4435 or hastelloy C-22
Gasket material:	EPDM, FPM or Kalrez (DN 2 - 15)
Process flange:	DIN or ANSI flange
Cable entry fitting:	M20x1.5; ½ NPT; G ½

Switching/status output: open collector, max. 30 V_{DC} / 250 mA, configurable for: error messages, medium monitoring, direction of flow, limit values

Current output: active/passive selectable; upper range value adjustable
 active: 0/4 - 20 mA, R_L < 700 Ω
 passive: 4 - 20 mA; max 30 V_{DC}; R_i ≤ 150 Ω

Pulse/frequency output: passive, open collector, 30 V_{DC}, 250 mA, electrically isolated, programmable as pulse or frequency output

Frequency output: end frequency 2 - 1000 Hz (f_{max} = 1250 Hz), mark to space ratio 1 : 1, pulse width max. 10 s

Pulse output: pulse value and pulse polarity selectable, max. pulse width adjustable, (0.5 - 2000 ms)

Status input: U = 3 - 30 V_{DC}, R_i = 5 kΩ configurable for: totalizer reset, measured-value suppression, reset error messages.

Creep suppression: switching points for creep selectable

Galvanic isolation: all circuits for inputs, outputs and auxiliary power are galvanically isolated

Display: LCD, illuminated, two lines - with 16 digits each, measured value/status indication, totalizer

Power supply: 85 - 260 V_{AC}, 45 - 65 Hz
 20 - 55 V_{AC}, 45 - 65 Hz / 16 - 62 V_{DC}

Power consumption: < 15 VA (AC version)
 < 15 W (DC version)

Switching current: max. 13.5 A (< 50 ms) at 24 V_{DC}
 max. 3 A (< 5 ms) at 260 V_{AC}

Protection: IP 67

EMC: EN 61326
 Namur recommendation NE 21

Vibration resistance: to 2 g (in accordance with IEC 68-2-6)

Weights: DN 2-15: 5.2 kg (without process connection)
 separate version: plus 1 kg
 from DN 25: see table
 separate version: plus 1.4 kg

Nominal size [mm]	DIN Nominal pressure	Weight [kg]	Nominal size [inch]	ANSI Nominal pressure	Weight [kg]
25	PN 40	7.3	1"	Class 150	7.3
32		8.0	1 ¼"		-

50		10.6	2"		10.6
65	PN 16	12.0	2 ½"		-
80		14.0	3"		14.0
100		16.0	4"		16.0
125		21.5	5"		-
150	PN 10	25.5	6"		25.5
200		45	8"		45
250		65	10"		75
300		70	12"		110

Selection of nominal sizes

The nominal size of the measuring sensor is normally determined by the pipe diameter. When flow volumes are known the table below can be used to decide whether the ideal flow velocity of approximately 2 - 3 m/s must be observed. If necessary, the nominal size of the measuring sensor can be reduced to increase the flow velocity. Higher installation costs can often be compensated by the low price of a transducer of smaller nominal size.

The flow velocity should be adapted to the physical properties of the measured medium:

- abrasive media: v < 2 m/s (putty, lime milk, ore wash etc.)
- blooming media: v > 2 m/s (for example, waste water sludge)

Nominal size		Recommended flow min/max upper range value (v ~ 0.3 or 10 m/s)	Factory settings		
[mm]	[inch]		upper range value (v ~ 2.5 m/s)	pulse value (~ 2 pulses/s)	creep (v ~ 0.04 m/s)
2	1/12"	0.06...1.8 dm³/min	0.5 dm³/min	0.005 dm³	0.01 dm³/min
4	5/32"	0.25...7 dm³/min	2 dm³/min	0.025 dm³	0.05 dm³/min
8	5/16"	1...30 dm³/min	8 dm³/min	0.10 dm³	0.1 dm³/min
15	1/2"	4...100 dm³/min	25 dm³/min	0.20 dm³	0.5 dm³/min
