

## Diaphragm Seals for Pressure Gauges

measuring  
• monitoring  
• analysing

- Measuring ranges:  
0...1 bar to 0...1600 bar
- t<sub>max</sub>: 350 °C
- Protection of the measuring device against aggressive, highly viscous, solidifying or crystallizing media
- Transmission lines enable high temperatures of the media to be measured
- Protection of the measuring device against vibrations by use of capillary tube
- Cavity free measuring points for special hygienic conditions
- Damping of pressure changes and pressure peaks

Model:  
DRM

## Description

Diaphragm seals are partitions for pressure gauges that prevent the material being measured penetrating the measuring system. For measuring pressure in the food industry the use of diaphragm seals are mostly indispensable. With the right choice of diaphragm seal systems it is possible to solve measuring problems that can often not be overcome with the pressure gauge alone.

## Application

KOBOLD membrane diaphragm seals are used when the pressure gauge cannot stand up to the requirements of the measuring position. Diaphragm seals transmit the pressure to be measured over that of the transmission fluid that is separated from the medium to be measured by means of the membrane. The transmitted pressure affects the pressure gauge, pressure switch or pressure sensor. The diaphragm seals can be connected to the pressure gauge either directly, or indirectly using a transmission line. Diaphragm seal and pressure gauge are joined together at the works to create one unit. Assembly and adjustment are carried out with extreme precision and years of experience.

### Areas of application:

- Media enriched with solids
- Crystallising measured medium
- Polymerising measured medium
- High viscosity measured medium
- Corrosive measured medium
- Toxic and environmentally hazardous measured medium
- Very low measured medium temperature
- Very high measured medium temperature
- Hygienic requirements for the food and pharmaceutical sector
- Batch changing without product residues in the measuring system

## Construction Type

We mainly manufacture diaphragm seals with every conceivable connecting system. Tongue and Bourdon diaphragm seals fill the gaps to cover all the requirements of the measuring point. KOBOLD diaphragm seals cover every type of assembly, whether with internal or external screw thread, or with coupling rings, clamp or flange mounting. Our tongued diaphragm seals are used when the measuring point only provides a very restricted space. Our Bourdon diaphragm seals measure the pressure within the pipe

Through which the measured medium flows. The type of construction means that the diaphragm seal can be kept very sterile. We are constantly developing new diaphragm seals and improving our existing models.

## Characteristics

A diaphragm seal barely influences the characteristics of a pressure gauge. The following items do influence them:

### Fill and work volumes

The diaphragm seals only contain the minimum amount of pressure transmission fluid required for temperature and pressure. This volume covers what is needed for the pressure gauge, the compressibility and the thermal expansion.

### Membrane

The membranes used are optimally coordinated with the corresponding diaphragm seals.

### Transmission line

Reduced volume transmission lines are used to keep the influence on the measuring system as small as possible. Transmission lines are however indispensable for high measured media temperatures, pressure or system pulsation or for unfavourably positioned measuring points.

### Pressure transmission fluid

The pressure transmission fluid transmits the pressure from diaphragm seal to pressure gauge. There are various fluids that can be used, depending on the operational conditions. All these fluids fulfil the requirement for minimum compressibility and lowest thermal expansion. Glycerine (up to +80°C) and liquid paraffin (from -10 to +120°C) are used as silicon-free fluids. Silicon oils are available for temperature ranges from -40 to +200°C, -20 to +350°C and -20 to +400°C. For special applications we can also fill the gauges with MF7 (Hg, -20 to +350°C).

In the choice of fluid not all factors can be taken into consideration because, depending on the application, other requirements have to be met, such as food safety specs or that they must be absolutely silicon-free. Our process technicians can choose the best pressure transmission fluid for the requirements.

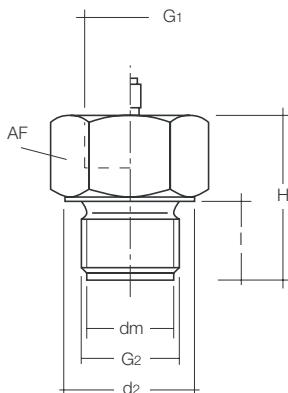

### Operating conditions

Since the proper pressure indication depends on the temperature of the fill fluid the pressure gauge with diaphragm seals can be adjusted for the operating conditions. To keep these errors to a minimum, the measuring systems are configured to suit the ambient and measured medium temperatures of the application. Without readings the gauges are as standard calibrated to a temperature of +20°C ( $\pm 2^\circ\text{C}$ ). Gauges with a transmission line are set without a height differential between gauge and diaphragm seal. Other height differentials must be stated when ordering because this greatly influences the accuracy of measurement, especially within small measuring ranges.

### Materials

All diaphragm seals are made of 1.4571 or 1.4404 stainless steel, as a matter of principle. Other materials can however be used for the membranes or the whole diaphragm seal. It is also possible to coat the diaphragm or the whole diaphragm seal – for example with PFA.

Accessories are listed as of Page 92.

### Diaphragm Seal DRM-600 / 601 with fixed male thread

Measuring range: 0 - 6 bar to 0 - 1600 bar (with pressure sensors also smaller)  
 Temperature range: -40 °C to +200 °C  
 Material: stainless steel 1.4301, st. steel 1.4571, other upon request  
 Diaphragm: flush mounted, stainless steel 1.4571  
 Max. length of capillary tube: up to 15 m, if required with armour  
 Filling liquid: following operating conditions

**Diaphragm seal DRM-625 with connection G 1/2 and enlarged bore, Ø 10 mm**

Measuring range:  
 0 - 1 bar to 0 - 40 bar (depending on nominal size)  
 Temperature range:  
 -40 °C to +250 °C  
 Material of housing:  
 st. steel 1.4571, others on request  
 Diaphragm:  
 front flush, st. steel 1.4571  
 Max. length of capillary tube:  
 up to 10 m, if required with protection hose  
 Filling fluid:  
 depending on operating conditions

DN 1/2" - 1"

**Inline diaphragm seal DRM-502 with clamp connection ISO 2852 for direct mounting**

Measuring range:	1.6 - 40 bar to 2.5 - 40 bar (depending on the pipe dia.)
Temperature range:	up to 80°C (>30 min. to 140°C)
Housing:	st. steel 1.4435
Diaphragm tube:	st. steel 1.4435 (DN 15/20/25), st. steel 1.4404 (DN 40/50)
Socket connection:	st. steel 1.4301 (DN 15/20/25), st. steel 1.4435 (DN 40/50)
Filling fluid:	depending on operating conditions

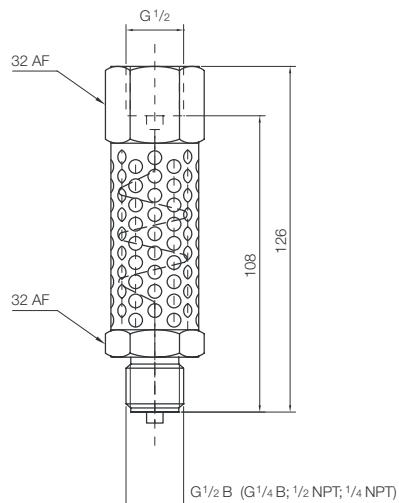

DN 1 1/2" - 2"

Model for direct mounting	DN	A	L	h	G	AF	Weight [kg]	Inner form
DRM-502 D15	1/2"	25	140	24	G 1/2	17	0.5	square
DRM-502 D20	3/4"	25	120	27	G 1/2	27	0.5	square
DRM-502 D25	1"	50.5	120	36	G 1/2	27	1.6	square
DRM-502 D40	1 1/2"	50.5	120	36	G 1/2	27	1.2	hexagonal
DRM-502 D50	2"	64	100	45	G 1/2	27	1.3	hexagonal

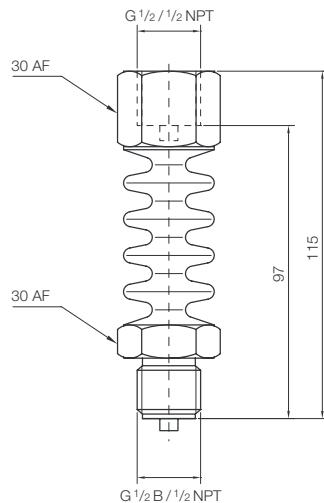

### Multipart design

- Very good cooling effect
- Perforated sheet body transmits little heat
- $t_{max} = 450^{\circ}\text{C}$
- PN 600 (temperature-dependent)
- All parts are made of 1.4571 stainless steel
- Pressure transmission with a capillary line (inner Ø 1.0 mm), that in addition balances out the pulsation of the measured pressure
- Also for direct mounting of diaphragm seals ( $t_{max} = 350^{\circ}\text{C}$ )

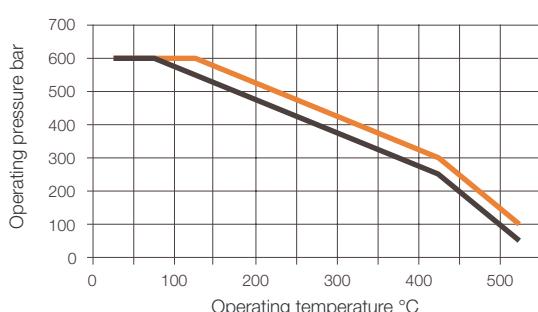

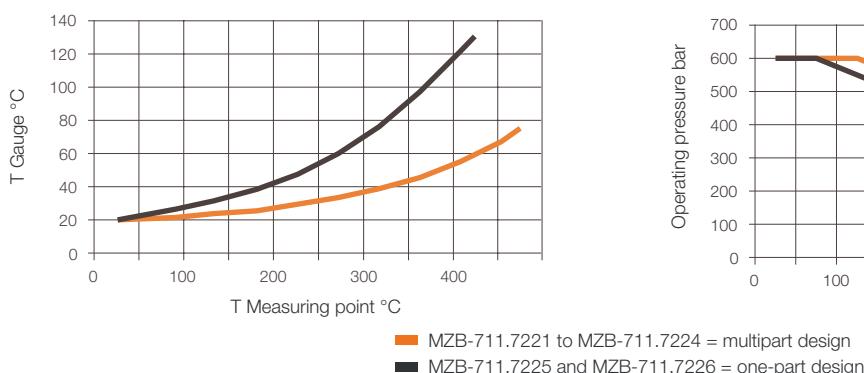

### One-part design

- Good cooling effect
- Optimum ration of surface to geometry
- $t_{max} = 300^{\circ}\text{C}$
- PN 600 (temperature-dependent)
- Body made of 1.4571 stainless steel
- Pressure transmission with tube diameter (inner Ø 3.5 mm), thus no change in reaction time
- Cheaper version
- for use with high viscosity media

**Temperature drift (guide value for cooling effect) and range of use (rated pressure)**

### Order Details

Model	Connection meas. device	Process connection
